AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions and listings of the claims in this application:

1. - 48. (Cancelled)

- 49. (Currently Amended) An implantable orthopaedic prosthesis, comprising:
- a laminar composite bearing having (i) <u>a</u> radiation crosslinked layer of polyethylene <u>having an articulating surface defined in a first side thereof;</u> and (ii) a non-crosslinked layer of polyethylene molded to <u>a second, opposite side of</u> said crosslinked layer of polyethylene at a melt-fused interface, <u>wherein said first side of said crosslinked layer of polyethylene is crosslinked to the same degree as the second side of said crosslinked layer of polyethylene.</u>
- 50. (Previously Presented) The implantable orthopaedic prosthesis of claim 49, wherein said radiation crosslinked layer of polyethylene and said non-crosslinked layer of polyethylene are compression molded to one another.
 - Cancelled.
- 52. (Currently Amended) The implantable orthopaedic prosthesis of claim 49, wherein:
- said-radiation-crosslinked layer-of-polyethylene has an articulating surface-defined therein, and
- said non-crosslinked layer of polyethylene has an engaging surface defined therein which is adapted to be secured to an acetabulum of a patient.

53. (Withdrawn) The implantable bearing of claim 49, wherein: said crosslinked layer of polymer has an articulating surface defined therein, and said non-crosslinked layer of polymer has an engaging surface defined therein which is adapted to be secured to a glenoid of a patient.

54. (Withdrawn) The implantable bearing of claim 49, wherein: said crosslinked layer of polymer has an articulating surface defined therein, and said non-crosslinked layer of polymer has an engaging surface defined therein which is adapted to be secured to a tibia of a patient.

55. - 124. (Cancelled)

125. (Currently Amended) An implantable orthopaedic prosthesis, comprising:
a laminar composite bearing having (i) a first layer of polyethylene having an
articulating surface defined in a first side thereof which is radiation crosslinked to a first degree;
and (ii) a second layer of polyethylene molded to a second, opposite side of said first layer of
polyethylene at a melt-fused interface, wherein (a) said first layer of polyethylene is radiation
crosslinked to a first degree from said first side thereof to said second side thereof, and (b) said
second layer of polyethylene is crosslinked to a second degree that is different than said first
degree.

126. (Previously Presented) The implantable orthopaedic prosthesis of claim 125, wherein said second degree is less than said first degree.

127. Cancelled.

- 128. (Previously Presented) The implantable orthopaedic prosthesis of claim 125, wherein said first layer of polyethylene and said second layer of polyethylene are compression molded to one another.
- 129. (Currently Amended) The implantable orthopaedic prosthesis of claim 125, wherein:

said first layer of polyethylene has an articulating surface defined therein, and
said second layer of polyethylene has an engaging surface defined therein which
is adapted to be secured to an acetabulum of a patient.

- 130. (Withdrawn) The implantable bearing of claim 125, wherein: said first layer of polyethylene has an articulating surface defined therein, and said second layer of polyethylene has an engaging surface defined therein which is adapted to be secured to a glenoid of a patient.
- 131. (Withdrawn) The implantable bearing of claim 125, wherein: said first layer of polyethylene has an articulating surface defined therein, and said second layer of polyethylene has an engaging surface defined therein which is adapted to be implanted into a tibia of a patient.
- 132. (Previously Presented) The implantable orthopaedic prosthesis of claim 125, wherein the second layer of polyethylene comprises radiation crosslinked polyethylene.
